I suspect you fumbled the command which gives *any* account *all* the permissions ASP.NET needs to run.

In spite of that, Try to give access permissions to the ASPNET account to the GAC directory itself.

The GAC directory is Drive:\WINDOWS\assembly

I did all you told me to do and the problem persists. This is the error event log data. It seems the same as shown below.

Event Type: Error
Event Source: ASP.NET 2.0.50727.0
Event Category: None
Event ID: 1089
Date: 18/05/2007
Time: 07:57:37 PM
User: N/A
Computer: LJONES
Description:
Failed to execute the request because the ASP.NET process identity does not have read permissions to the global assembly cache. Error: 0x80070005 Access is denied.

The critical part of the error message is this :

!> Failed to execute the request because the ASP.NET process identity
!> does not have read permissions to the global assembly cache.

Are you impersonating the ASP.NET identity ?

You are running on XP.
XP's default ASP.NET identity is the ASPNET account.

run :

```
aspnet_regiis -ga machinename\aspnet  
( substitute *your* machine's name for "machinename"... )
```

....from a command window in the .Net Framework 2.0 directory :
Drive:\WINDOWS\Microsoft.NET\Framework\v2.0.50727

I'm not sure if you can get away with running just :

```
aspnet_regiis -ga aspnet
```

Are you impersonating the ASP.NET identity ?

You are running on XP.
XP's default ASP.NET identity is the ASPNET account.

run :

```
aspnet_regiis -ga machinename\aspnet
```

Re: Server Application unavailable error

(substitute *your* machine's name for "machinename"...)

...from a command window in the .Net Framework 2.0 directory :
Drive:\WINDOWS\Microsoft.NET\Framework\v2.0.50727

I'm not sure if you can get away with running just :

```
aspnet_regiis -ga aspnet
```

That should get you up and running again.
