Thanks. w3wp.exe appears. It seems that I need to request a aspx page first.

It's possibly you are confusing the IIS native process with the managed code worker process, w3wp.exe.  
If you request an ASP.NET (aspx) page, you can see W3WP.exe in the processes list in Task Manager.

I am running IIS 6 under windows 2003 server. It is strange that I do not see "w3wp.exe" or "aspnet\_wp.exe". Where is the IIS worker process. IIS seems work find, but I cannot debug code. Help needed.
