Hi Alex,

Regarding on this "POST" redirection question, I have also found your another cross thread below:

Subject: POST Redirect to another Site  
Newsgroups: microsoft.public.dotnet.framework.aspnet

As you've found and suggested by other community members, you're recommended to use client-side script to do the post redirect since it will need to let the client-side do the redirection, server-side redirection(through webrequest or webclient) won't help here since the client-side browser know nothing about this and those status such as cookie won't be available in server-side redirection.

Also, I've posted a reply there and suggest you use Bruce's suggestion which use script to manually remove the "\_\_VIEWSTATE" hidden field in form so that if you post to another ASPX page, you won't get MAC validation error.

If you have any further questions, please feel free to post in that thread.

Thank you for your posting!

Sincerely,

Steven Cheng

Microsoft MSDN Online Support Lead

RE: "POST"ing to a different Web Site

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
