I have no problem writing PDF file to hard drive on the fly with iTextSharp, but have had no luck in sending PDF as a stream in my asp.net web application.

I am simply copying the example at

<http://itextsharp.sourceforge.net/examples/Chap0105.cs>

But, Adobe Acrobat reader complains that the file has been damaged or cannot be opened, or says something like "if the file was sent as an email attachment, it was not properly decoded" or something to that effect.

At the [www.asp.net forum](http://forums.asp.net/p/1093198/1643956.aspx#1643956), <http://forums.asp.net/p/1093198/1643956.aspx#1643956>, someone says that we need to reset the value of the memory stream position to 0. I tried that with no luck.

Any idea about how to shoot this problem? Thanks.
