-

I have a site www.stf.com and a site www.stfstage.com (where I do all my testing).

The problem is that www.stfstage.com is only internal and I need to get access from the outside (without creating a new domain).

I tried to create a Virtual directory inside my stf site so that I would access it like: www.stf.com/stage/.

I run as www.stfstage.com fine and have for a long time.

But if I try to do it as www.stf.com/stage/ I get the error:

Description: An error occurred during the processing of a configuration file required to service this request. Please review the specific error details below and modify your configuration file appropriately.

Parser Error Message: The module 'ScollKeeperModule' is already in the application and cannot be added again

Source Error:

```

Scrollkeeper is apparently causing the problem but only as a Virtual directory. It works fine when I access it as www.stfstage.com.

Virtual Directory not working

If I take out the ScrollKeeper sections it seems to have a problem with virtual paths and gets an error:

The virtual path '/skins/mth/MainPage.ascx' maps to another application, which is not allowed.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.Web.HttpException: The virtual path '/skins/mth/MainPage.ascx' maps to another application, which is not allowed.

Source Error:

```
Line 27: navigation = "NavigateTop" & ".ascx"  
Line 28: end if  
Line 29: pageControl = LoadControl(thePage)  
Line 30: thePlaceholder.Controls.Add(pageControl)  
Line 31: contentControl =  
CType(thePlaceholder.FindControl("_ctl0:Navigation"),Control)
```

Source File: C:\Inetpub\wwwroot\StfStage\jobSeeker\displaycompanyJobs.aspx
Line: 29

My code that is causing the problem is:

```
tePage = "/skins/" & session("CompanyInitials") & "/" & "MainPage" &  
".ascx"  
pageControl = LoadControl(thePage)
```

How can I make this work in my scenario – or can I?

Thanks,

Tom
