Has anyone had success with this community edition obfuscator that comes with vs2005? I put a dll through it and then when I substitute the obfuscated dll for the original I get an error at compile time saying:

Error 1 Could not load file or assembly 'GP2, Version=0.2.0.0, Culture=neutral, PublicKeyToken=21f9ec8df0a8817f' or one of its dependencies. Strong name signature could not be verified. The assembly may have been tampered with, or it was delay signed but not fully signed with the correct private key. (Exception from HRESULT: 0x80131045)

There is no support for this "software" that I am aware of.

Does anyone know of an affordable obfuscator that works?
