"OZI" wrote:

Simply put,

set a BreakPoint ( need be in Debugging mode and not in Release Mode) in your Page Load event handler. Read about debugging and how to set a breakpoint if you don't know how.  
use F11 to step through the code line by line, to narrow down where the error is occurring.  
use F10 to step over etc...

I am assuming you are getting some data from a database to authenticate the user etc..  
check if you are getting any data back if you expecting data back.  
You said that things break after you try to login, are you being authenticated?

Without seeing any code it is very difficult to help you out.

Re: The IListSource does not contain any data sources.

Re: The IListSource does not contain any data sources.

Thank-you for replying!

I am very new to .NET and programming, very new :-) How can I trace my code? What more information can I provide to get some more help? Your assistance is much appreciated.

Walid

"OZI" wrote:

Did you trace your code and see where it is failing somehow your data binding is failing, you are not getting data or something.  
Limited info given.

Hello:

I have migrated a site from IIS5 to IIS6. The site is configured and the we app is installed on the new IIS site. I can get to the web page but when I try to login, this is what I get the following error below. I would appreciate any insight, direction or help regarding this.

Thank-you!!

Walid
