For the last few days some of my web site users have been having problems posting asp.net forms. This problem arises everytime they try to post a form in asp.net, but never when the page is plain old asp. The different forms are on the same web site. None of the asp.net forms work, but all the asp forms work. There is no problem just loading an asp.net page, it's just when posting the page the errors occurs.

When the user tries to post the form the page starts loading and continues to do so for at least 20-30 seconds, then the normal Page could not be shown error shows up. The event log does not show any error.

The users are on different networks, have both PCs and MACs and have at least Firefox and IE. Some have Norton and some haven't (probably at least, that's what they said, but they may be wrong)

This problem is driving me nuts... Please help me!

Did you try to restart the web server?– Hide quoted text –
