- 

1. Simulate user interaction with a web site
2. Handle ASP.NET forms authentication login

Have a look

HtmlUnit: <http://htmlunit.sourceforge.net>

HttpUnit: <http://httpunit.sourceforge.net>

JWebUnit: <http://jwebunit.sourceforge.net>

All are written in Java but can be used for any "website".

3. Make random web service calls (and hopefully is compatible with WSE)?

What do you mean by "random web service calls"?
