Thanks for the reply, but I'm not sure what to do with this.  
Where do I put this string?

I'm coding in VB ASP.NET.

Thanks.

It sounds like you just want to store the UserID in a Session variable,  
e.g.  
`Session["userId"]=UserID;`

Using either EW or VSE2008, I want to have a GridView that will:  
– Insert the logged in user's UserId from either the User table or the membership table when the user inserts a record.  
– When the user views the GridView, only their records are shown. I don't want to use a query string that uses the UserID for security reasons, so I'm thinking that I can use a SessionID that is tied to the UserId?

Requests:

1. Insert a record that will automatically insert UserId
2. View records in GridView that belong to the logged in user with SessionID

Re: SessionID -> UserId Insert and View

I'm not sure what all I need to do to get the SessionID working? I have put  
"<sessionState mode="InProc" cookieless="false" timeout="20" />" into my web.config file.  
But now what?

Thank you for any help.
