I have a person class that has a 'name' property. I want to bind that property to a textbox on an ASP.NET form.

In a winform, I can do something like this:

```
dim nameBinding as binding = new binding("text", me.person, "name",  
true)  
me.nameTB.databindings.add(nameBinding)
```

Is there an equivalent in ASP.NET?

Thanks,

Chris
