Hi Joe,

As for the popup window, it seems use script to create div or table and display it. I think the first problem you mentioned maybe related how the popup component retrieve certain information in the xhtml page (through javascript DOM).

As for ImageButton postback issue, is it also related to the "CreateWindow" function? I've tried the following simple script handler which will not generate postback when I click the ImageButton.

```
=====
<asp:ImageButton ID="ImageButton1" runat="server"
.....
onclick="ImageButton1_Click" OnClientClick="alert('hello');return
false;" />
```

Sincerely,

Steven Cheng

Hi All!

I'm using a script to show a popup.
<http://www.openwebware.com/products/openpopups/>

This displays fine in IE but it does not work right in Firefox. In Firefox it displays the table but that's it. If I move the call to createWindow outside of a form tag then I get a small window with a title bar but no body.

Now if I change the DOCTYPE to HTML instead of XHTML then it display correctly but the entire page isn't right. Text is too large and bold.

In addition I'm displaying this by clicking an ImageButton. I'm calling it in the OnClientClick something like this:

```
onclick="createWindow(.....);return false;"  
yet I still get a post back unless I use the HTML instead of the XHTML.
```

Is there something else that could be done to get this to work right? IE doesn't like the HTML otherwise I would just use that.

Thanks,
Joe
