Hi

I have an asp.net 2.0 website running with Windows integrated security and want users to be able to login using a formular on the website instead of the standard windows login prompt. All users allready exist in the Active Directory.

Can i accomplish this by switching to forms login? or does it only work when my users are stored in a database?

Thanks  
Billy

I have found a Membership provider for Active Directory users so it seems to be possible.

Does anybody know what Membership provider to use if I want local users on the server to be able to login through forms authentication?  
Do I have to write my own Membership provider?

Regards  
Billy
