Sorry, completely not clear....

Can you rephrase or may be write what you want in pseudo SQL....

PS: I meant to say

```
INSERT INTO table1(Col1, Col2,Col3)
```

```
SELECT MAX(col1), col2, col3 FROM table1 GROUP BY col2, col3
```

George.

"iHavAQuestion" <iHavAQuestion@xxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:3A36BC22-1916-4BEA-BF6E-249D015E3C70@xxxxxxxxxxxxxxxxxxxx

Thats fine...

But, I actually wanted to add the MAX(col) from tabe that exists from the same data base in place of @var1/Col1 in the below stored procedure

Hope you got my question

Create Stored Procedure Name

```
(  
  @Var1  
  @Var2  
  @Var3  
)  
Insert into table1  
(  
  Col1  
  col2  
  col3  
)  
Values  
(  
  @Var1  
  @Var2  
  @Var3  
)
```

Re: inserting the max colum in the stored proc

you can use something like in (MS SQL)

```
INSERT INTO table1(Col1, Col2,Col3)
SELECT MAX(col1), col2, col3 GROUP BY col2, col3
```

George

```
I have stored procedure
Create Stored Procedure Name
(
  @Var1
  @Var2
  @Var3
)
Insert into table1
(
  Col1
  col2
  col3
)
Values
(
  @Var1
  @Var2
  @Var3
)
```

But in col1 i need to insert select max(col) from tablename,
which is
in
the
same database.

how do I do that??
