hi

how can i show every 10 records of my db in datalist in several page

i want to get it the paging property

i even wrote this code

```
AccessDataSource1.SelectCommand = "SELECT * FROM table1 where id  
between " + (page - 1) * 10 + " and " + (page * 10 - 1) ;
```

but it works when my 'id' have a correct sequence of number

you know for example when you have 3 records with id 1,2,3 and when

you delete second record after that you have 2 records but your new

second record's id is still 3

and it make a mistake

what is your solution for paging the datalist?

thanks

.
