Please let me know how should this be done :
impersonate some domain-user that *can*
access that share *and* use the UNC path (\\server\share) to access it.

My problem:

When trying to read the file the user selects in PDA it gives an error message

DirectoryNotFoundException:could not find a part of the path.(The same code works fine in my system and diff remote servers)

My Code:

```
Stream a = ReadStream(txtFilePath.Text);  
Label1.Text = a.Length.ToString();
```

```
using System.Security.Permissions;  
[assembly: PermissionSetAttribute(SecurityAction.RequestMinimum, Name =  
"FullTrust")]  
namespace FileBus  
{  
  
public Stream ReadStream(string pathSource)  
{  
    FileStream f = new FileStream(pathSource, FileMode.Open,  
    FileAccess.Read);  
    Stream a = (Stream)f;  
    return a;  
}  
}
```

Please help.

Re: Could not find a part of the

While trying to create new File, i receive the following error=
message: "System.IO.DirectoryNotFoundException: Could not find a part of
the
= path=20 "Y:\Reports.pdf ". The Y: is shared folder of another system and it
mapped to the local system. The path exists.

The Y: mapping is for *your* account, which is not the account the
website runs under. Moreover, this ASPNET account is a local account
with limited privileges. It can not access the network for example.
You might need to van the site impersonate some domain-user that *can*
access that share *and* use the UNC path (\\server\share) to access it.
