Hi All!

Now I get some problem in understanding serialization.

We have SerializableAttribute and NotSerializedAttribute. But where is common mechanism of serialization.

I can't catch it. Formatters closely linked to serialization, so MSDN describe only this part of process.

Common serialization mechanism not described. Why System.Xml.Serialization.XmlSerializer appear in CLR. Why XmlSerializer is not a formatter. Too many questions.

Does anybody know some resource that describe serialization in brief .

Thank you.

Dr-Wicked
