Depending on exactly what you need this can be a little complex. However if all you need to do is be able to use Internet Explorer for instance, from the emulator, then go to the Settings tab and set the "My Network card Connects to" combobox item to "The Internet.

However this won't necessarily address some other issues you may have if you problem is that you are trying to connect to resources programatically. If you're having a problem with a connection to a network resource through code though, let me know (and ideally let me know specifically what's happening) what you're trying to do and I'll see what I can do.

Cheers,

Bill
