My installation mechanism is bot complicated..

like im goin to include 3 application as one..

- 1.cryptography (Decryotion of data at pocket pc level) applicaiton
- 2.main application
- 3.updater application

i want to put all these in SD CARD..and protect these files from the user..

:::no way to alter or delete the files by user, in SD CARD..how to do it?

and one more question at cryption

\*i have a 4 folders in a pocket pc

\*each has several encrypted files

i want my decryption program to check all the 4 folders and decrypt the files inside the folders automatically without user interaction for each..

say folder

\*Business\* Has

- 1.enc
- 2.enc
- 3.enc

i want my decryption applicaiton to decrypt these files and save it as

- 1.wmv
- 2.wmv
- 3.wmv

in a single shot..

is there any sample code available for this ????

Right now what i have done is hardcoded the path of the file ,password and filename...

```
