Hi Peter,

Yes i have already implemented Autoupdater in my application, but my problem is my cab file is 4.5MB which downloading over GPRS is not a good idea.

Also by version control i meant is e.g my version number currently is V 9.2.2.9 now i only want to update my application if Schema is Changed/any parameters changed in webservice webmethod so in this case how we update the version number do we change to V 9.2.2.10 or do we change to V 9.2.3.0?

Is there any standard procedure to do

1. Version controls on PPC accessing webservice on webserver?
2. How to sync ther version on both Webserver and PPC

Regards
Salim
