Hi Graham,

I didn't intend to make you nervous about performance with SqlCE if you're not having issues. <g> I'm just trying to help track down a performance issue that somebody else is having and knew that you had some apps (especially the medical one) that worked with some large tables in production.

With the release date for VS 2005 at November 7, it shouldn't be that long before we all have final bits.
