Take a look at this article:

Daniel Moth wrote:

The default is that it scrolls to the top. The first link I sent shows how to scroll to the bottom. The second link shows an alternative way to control scrolling by pinvoking. It sounds like you want to scroll somewhere in the middle.

The ideal solution is to be able to append text with no scrolling at all. Failing that, I want to be able to get the current vertical position and reset it back after appending.

I suggest you look at the examples from the second link and work it out.

## Re: Textbox scrolling

I did and saw nothing there that solves this problem.
