I can think of absolutely no reason, other than a contractual obligation to be in control of the source for everything, that would cause me to want to know how to process SMS messages myself. I'd say that it's a complete waste of time, unless there's some reason why you'd want to be a low-level expert in how the phone stack works.

Actually, time is indeed valuable. I don't have anything against or any objections on InTheHand, indeed it is very impressive and superior at all. I'm just looking at the possibility of doing it on my own, if its really possible. Also, the things that I will be needing from InTheHand, such as reading sent sms and sent email messages, will cost me \$\$ somehow, so I'm still looking on the possibility of writing it up since it was already done by others.

Do you think that its not worthiet to write the wrapper on my own?

Thanks!  
Mpoy

So, your time is of no value at all to you? What's your objection to InTheHand?

Yeah, I guess i'll take that one. But I can hardly find a reference in the internet for such. That's why I'm having a hard time

Re: Is it possible to retrieve sent email message in Opennetcf?

writing that  
wrapper. Can you point me to some references in the net?

Thanks!
