Hi,

I am new to the development of Windows Mobile 5.0 based applications, and the other day I came across this article:

<http://www.pocketpcdn.com/forum/viewtopic.php?p=19813&sid=21d31da16cf2305f47ca146948828902>

where a way of executing Jscripts within a form is presented for Pocket PC 2003 SDK. After looking at the source code I've found out that to be able to execute a Jscript, the code makes use of IActiveScript which is not a part of the .Net Compact Framework 2.0 SP1.

I would very much like to be able to execute JScript for Pocket PC 2005 using C#, but after browsing the web I am unable to find a way to do this.

Any help would be appreciated.

Thanks,

Espen
