If I understand you, you're trying to simulate a Windows CE-based device where the *built-in* flash 'drive' is bigger than 32MB? Using the "storage card" method is as close as you're going to get to that. I don't quite see what the big deal is, though. You CANNOT SUBSTITUTE TESTING ON THE EMULATOR FOR TESTING ON THE REAL DEVICE, anyway. If you have a real device that you're targeting and it has 128MB of flash storage, run your test on it; that's the ONLY way you'll have actually tested the code under real circumstances.

That is very interesting... which makes me think, why have emulators? I feel this as a basic requirement, unless I missed the big picture in the limitation.

If somebody from MS is reading and following the conversation, I think as Part of SP3 or next release they should make it available to change.

VJ,

As far as I know, based on Barry Bond's comment, 32Mb is a hard limit for the DeviceEmulator.

Re: Emulator

I have reset the computer, the device (soft/hard).. no use. It just refuse to go above 32MB. My computer has 30 GB space and is a 2GB memory machine... I have even re-installed the emulator... Right now the storage card works for me, but I am really curious to know what is wrong here..

Is there a place I can see any emulator logs... that might help me narrow the problem?

Yes Ginny sure I have 3 devices to test, that is also plenty, but I love the emulator, so I don't have to carry the device all place, like when I work from home. Just this one annoying feature...

I just saw this post.. The fixed it?? somebody please help me..!!

VJ,

Did you do a reset on the emulator after you changed the memory size?

I just
needed
additional
space, try
some File
I/O. I got a
storage
card
attached i.e
set to my
local folder
and do the
File I/O at
that
folder. Well
right now
the storage
card is to
local folder
and its
30GB, that
is my free
space in
computer
:-), which
is sort of
cheating,
but works
now. Ideally
would like
to do
without
storage
card, but
increase the
space on the
device. I am
not
receiving
any
error
message. It
just does
not go
beyond

Re: Emulator

32MB. It would be really bad, if I cannot match the emulator size,space to my device size and space as needed for test. I am just hopping Microsoft has not done a thing like that. I am just new to this world, so I am still putting this on me, and I am not able to figure out.

Thanks for your help
VJ

Ginny

I
see
the
information
and
Thanks
for
the
information.

I
changed
the
RAM
size,
from
128
–
256,
not
helping.
Should
it
be
ROM
size,
but
I
have
ROM
image
address

Re: Emulator

only,
what
does
that
mean?

I
am
new
to
device
programing,
kindly
help

Thanks
VJ

VJ,

In
VS
2005
select
Tools,
Options,
Device
Tools,
Devices.
Select
the
emulator
you're
interested
in
and
click
Properties,
then
Emulator
Options.

Is

there

any

I

can

increase

the

storage

space

for

a

emulator?
