OK, thx for the information!

I'm thinking that you're probably asking in the wrong place. This doesn't really have anything to do with the .NET Compact Framework, so, unless you happen to find an expert on the CE Web server who also hangs out here...

If it were me, I'd post to microsoft.public.windowsce.platbuilder. You should also mention some crucial information in your post like: what version of Windows CE, what device is it running on (it's a Windows Mobile device or one that you built, etc.)?

Hello!

I'am working on A Web-based interface that is runing at the HTTPD Server that Windows ce is providing. The system for which the project is build for is an headless device. I developped a authentication system that will check the password on a sqlce database, and then redirect the User on different websites in dependence of the user access rights.

It works well, but I have a major security problem!

When the login data are checked, I create a cookie that is send to the page to which the user is redirected by response.redirect("xxx.asp").In fact I'm using asp with vbscripts. I want to make at the top of the target site a check of this cookie, to ensure that the user not simply came there by typing the right url. The only problem is that I can't make this cookie\_check

Re: Use cookies as authenticate under wince

because the webserver returns me this error:

The HTTP headers are already written to the client. HTTP header modifications must be made before writing page content

ASP scripting compilation error: '80020009'

Description:

In file: /Storage Card/ad\_bnz\_page.asp  
On line: 2

Here is the corresponding script:

```
<%  
response.Buffer=true  
if request.cookies("rights")<>"2" or request.cookies("st")<>"admin" then  
response.redirect("login.asp?mess=6")  
end if  
>%
```

If I remove line 2, the same error will occur at line 3 =>  
response.redirect("....asp")

How can I make this check work if the response.buffer=true method doesn't work?

Thx for your help!

p.s: The server method I'm using is POST
