Hi

I want to create a .net compact framework and full framework application that uses web services. However the web services are created with java running on an apache server. Can this be done? Can my .net C# applications use web services hosted on an apache server written in java? What issues might I run into?

Thanks eric... I have another question that may seem a bit odd. As an alternative to the previous question can I have both an apache and iis server on the same server box (same virtual directory) and use

Re: Can a compact framework application of full framework application hit a java webservice running on apache

Re: Can a compact framework application of full framework application hit a java webservice running on apache the iis server to host the webservices that touch the java objects?

Weird questions I know....

.
