I upgraded my laptop to SP2 w/o problems but have been unable to apply the .NET Framework 1.1 SP's from the windows update site. The update simply hangs (non-responsive) everytime I rerun this update .. it has downloaded the installation files sucessfully. ... and my laptop still functions 8-)>

I do have Norton Internet Security and Spybot on both, my laptop & pc. Strangely my PC which has much older H/W upgraded without a hitch.

Anyone knows whats up? Any leads will be helpfull

Am assuming this is preventing the VS.NET 2003 install too the Setup of which is resulting in an error. If anyone can point me to any solutions to this too it will be just great!

Thanks

Abhinav
