Hi All,

I am try to adapt the exception/logging framework provided by Enterprise Library in my .Net XML web service development. However, I encounter the following error:

```
{ "There is an error in the XML document. The specified type was not recognized: name='LoggingExceptionHandlerData', namespace='http://www.microsoft.com/practices/enterpriselibrary/08-31-2004/exceptionhandling', at <exceptionHandler xmlns='http://www.microsoft.com/practices/enterpriselibrary/08-31-2004/exceptionhandling'>." }
```

Anybody can help in the trouble-shooting. The code works well if not going through the web service!!

Thanks,
Elton
