Thanks for your reply Scott,

For security in webservice, as I mentioned in the last reply, it did somewhat depend on the different vendor's implementation (such as Websphere, web logic ...) over the standard WS-security* protocols. Therefore, those articles will certainly focus on a certain couple of platforms/products. Anyway, most of the resource of WS interoperability should reside on the following sites:

#Microsoft .NET and Java/J2EE Interoperability
<http://msdn2.microsoft.com/en-us/vstudio/Aa700845.aspx>

Sincerely,

Steven Cheng

Re: Consuming J2EE Web Services

My bad John. I should have been more specific in my question. I was looking for more details on the cross-platform security issues that might come up.

Thanks.

Believe it or not, I've searched quite a bit and can't find any relevant information on how to consume a J2EE web service from a .NET consumer WITHOUT the aid of any 3rd party tools.

I have two questions:

1. In a nutshell, how is this accomplished?

Scott, sometimes, when you don't find instructions on how to do something,

it's because no instructions are necessary.

You consume a J2EE web service exactly the same as any other kind of web service. Use Add Web Reference, point to the WSDL, and you're on your way.
