Ok So now that we have covered that...

Back to my original question:

So has anybody got links or documents or other info on how I can achieve this(application farming with WCF or WSSF). I am looking for a "heads up" to other peoples research before I need to conduct my own

I found an MSDN article on "Load Balancing" at <http://msdn2.microsoft.com/en-us/library/ms730128.aspx>.
