

Lock/Stop/Restrict entry when combo box is bound.

I have been unable to google the right keywords to this hopefully easy answer.

I bind a combobox:

With cboOperator

```
Dim operator As OperatorDataTable = _company.Operator
```

```
.DataSource = operator
```

```
.DisplayMember = operator.Name.ColumnName
```

```
.ValueMember = operator.OperatorId.ColumnName
```

End With

When I run the app, unfortunately, I can still type data into the combobox. I only want users to be able to select from the populated list.

Is my only solution to filter out keys on keypress or is there something much simpler I have missed?

Thanks,

Ross
