

Property value not saved

I have a custom DataGridViewTextBoxColumn.
I've added the following property.

```
<Description("Specifies a data type for validation."), _  
Category("Behavior"), _  
RefreshProperties(RefreshProperties.All), _  
  
DesignerSerializationVisibility(DesignerSerializationVisibility.Visible)>  
_  
Public Property DbType() As DbType  
Get  
Return _Type  
End Get  
Set(ByVal Value As DbType)  
_Type = Value  
End Set  
End Property
```

When I modify the property at design time in the editor window, the value is not saved to Designer.vb.
Any ideas why this is happening?

Mike
