Sijin

I have built a simple application in VB.Net and (I thought) followed the directions in the first link, but when I browse to the exe file, I get the following error:

CGI Error

The specified CGI application misbehaved by not returning a complete set of HTTP headers. The headers it did return are:

Unhandled Exception: System.ArgumentException: Invalid directory on URL. Do you have any ideas of what is happening and what I need to do to fix it? I am running XP SP2 and the web server is on my development machine. TIA Ron L. "Sijin Joseph" <[sijinNOSPAMdotnet@hotmail.com](mailto:sijinNOSPAMdotnet@hotmail.com)> wrote in message [news:esFy3qEkeHA.3664@TK2MSFTNGP11.phx.gbl...](mailto:news:esFy3qEkeHA.3664@TK2MSFTNGP11.phx.gbl...)
