thank u mike

Mike wrote:

For sure.

For example

```
Panel p = new Panel();  
p.Dock = DockStyle.Fill;  
//other panel settings and add child controls.
```

```
myUserControl.Controls.Add(p)
```

hi all,

i want to create a panel in the user control of windows application.

the panel should have textboxes lables, radio button, checck box's etc
can u please tell me is it possible do like this

Thanks
Koti
