>From within Visual Studio.NET, press CTRL+ALT+J.

This will open the Object Browser and all the classes that are in your current project are there for you to see.

You can add references to all other classes that exist in the Framework and they will also be displayed there as well.

Also, if you bought Visual Studio .NET, there are numerous posters that come the product with tree views of "most" of the classes.

Remember, there are somewhere around 20,000 classes in the .NET Framework. Or is it 40,000?

At any rate, it's rather large and one tree view just won't cut it unless you have an old dot matrix printer and tractor feed paper. ;)
