Hehe ... if they weren't on my list, I just haven't gotten to them yet. However, I'm cognizant of Bill Vaughn's stuff (I have read some of his stuff online), as well as the "recommended reading list" on devbuzz. Also, the Tiffany SQLCe book I've seen touted well, but just have not gotten to it yet.

There have been a few books I read before .Net that are so good that I hate letting go of, including "PocketPC Development in the Enterprise" by Christian Forsberg and Andreas Sjostrom (simply invaluable for pulling all of the PPc concept together) and "ADO: ActiveX Data Objects" by Jason T. Roff (a heckuva ADO reference).

Thanks for the advice -- so when are you writing yours?
