Hi,

I created some thumbnails from pictures – they all have a size of up to 80 pixels in width or height (if it is a square pic, the size is exactly 80 x 80, otherwise 80 pixel is the size of the greater dimension).

For displaying purposes, I want to view them all in the same size, that is 80 x 80.

Pictures that are smaller shall have a white border to fill up the size to 80 pixels.

How can I do that? I have the thumbnail already in a System.Drawing.Image object, but I have no clue how to add this white border, or even how to create the empty 80 x 80 white picture first, where I want to draw my thumbnail into. I looked already for the classes Bitmap, DrawImage, Graphics (all in namespace System.Drawing), but couldn't find any appropriate method.

I appreciate any help,

TheLetti

.
