Hello Ferunic,

Welcome to MSDN newsgroup.

>From your description, you're creating an .net class instance remotely and when try accessing one of its method you encountered NullReferenceException, yes?

Based on the error message, the problem seems due to the object instance not created correctly. I'm wondering what's your actual remoting scenario, are you creating remote object through cross process remoting(through tcp/http channel....) or just creating remote object in other appDomain within same process? If convenient, I'd suggest you provide some further description or code snippet on this.

Regards,

Steven Cheng

| Hi,
| We have an application which can both run as Local and with remoting,
this
| app use an external dll (let us call it exapp.dll) and everything is ok
when
| the app runs Local (not remoting) but in remoting mode I can declare an
exapp
| object but whe I tried to call method exapp.mymethod() an
| NullReferenceException is thrown.
| Any clues?
| Thank's
