Dear All,

Just for clarification: under .net 2.0 FW is one still possible to set permissions on per application level?

If "Fix this Application" is not any more, what would be the recommended procedure or tool?

Thanks for clarification, with best regards  
ANDI

Hi Jeremy,

I am afraid this is a product issue. The "Fix an application" functionality has already been removed in .NET Framework 2.0 configuration manager. (Link is still there for now, but basically it is gone).

We apologize for any inconvenience this may caused. I will forward this issue to our corresponding team for review, that link should also be removed since it has nothing to do.

Thanks

Best regards,

Gary Chang

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues

Re: "Fix this Application" Problem

where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
