Normally you just reference it like normal. Add a reference and it should work. I have lots of 1.1 dll's and components I wrote that load under 2.0 apps just fine.

Hi, all

I have met a very trouble problem...

I have a thirdpart component which can only run at 1.1 version, but I want to import and use it at a 2.0 project...

I have tried to use reflection, but it didn't work...

how can I do ?
