Up until now, we've been signing our manifests using the temporary certificate built by Visual Studio. We now have a certificate from Thawte. Since Thawte only provided a ".spc" and ".pvk" file, and mage.exe requires a ".pfx" file, I had to use the pvk2pfx tool to create the pfx file. When I run mage to sign, like this:

```
mage -s myapp.exe.manifest -cf ourcompany.pfx -pwd xxx
```

We get the subject error message. I consulted with Thawte, and they provided another microsoft tool (pvkimprt.exe) to generate the pfx file. That didn't work either – same error.

Can anyone shine any light on this? I don't even know what the error message means...
