

[newbie] strange error

Hi,

I'm currently developing a VB.NET application and I encounter a strange error:

Look at this code:

```
Private Sub LinkLabel5_LinkClicked(ByVal sender As System.Object, ByVal e As
System.Windows.Forms.LinkLabelLinkClickedEventArgs) Handles
LinkLabel5.LinkClicked
    PanelStart.Visible = False 'set the current panel visibility to false
    PanelFWSettings.Visible = True 'line of crash
End Sub
```

This (simple) line of crash causes the application to hang until, after a while, its thread is terminated. The strange thing is, that the same executable indeed does work on a different machine – and that this error just applies to this one and only panel.

Any ideas? Is this a Visual Studio bug?

Thanks a lot
Peter
