Hai Guys,

I'm facing a problem in reading the file values. When the record contains the Chr(0) i can get the value till Chr(0). After Chr(0), I'm unable to get the value. It's getting truncated.

When I tried with Console Application and tried to print it out, It's working perfect. But when I'm using the Web Services to access the same function, it's not getting the value.

Please help it's very urgent

Regards,

Venki
