I'm using the MCAD/MCSD self-paced training kit to study for .Net certification. However, I'm stuck in chapter 5, because my best attempt at installing the example Contacts database leaves me with no user-defined tables. I have successfully established a connection, but when I go to expand the tables icon, there are no tables. Checking out the database setup in my instance of SQL Server, I see that the database only contains SYSTEM tables.

Has anyone encountered a similar problem? Or does anyone have an idea of what might cause this? I'm really getting tired of my job, so I want to get through this certification posthaste.

.
