Stanley,

That is strange, however it can be that ASP had to be done in VB and therefore the C# programmer is less used to ASPNET.

Be aware however that in ASPNET the samples are often showed as scripting, while using a DLL is much nicer. Using the DLL has in the ASPNET world the strange name "Code Behind".

This gives you as well more security than all kind of other things that are written. Unlucky enough are most samples done in the by ASP programmers used scripting style while using ASPNET code.

I would put a book that is using only Scripting in ASPNET direct at the garbage.

I hope this gives some ideas

Cor
