Hello,

Thanks to members of this forum, I was able to get this method to work to write a record to an Access DB from the fields on a webform. I'd like to know if this is current practice or is there something better to use, and where can I find examples.

Thanks for your help and God Bless,

Mark

```
Dim connectString As String = "Provider=Microsoft.Jet.OLEDB.4.0; Data Source=" + Server.MapPath("_database/DragonImporting.mdb")
```

```
Dim myConn As New Data.OleDb.OleDbConnection(connectString)
```

```
myConn.Open()
```

```
Dim strSQL As String = "INSERT INTO tblContactForm1 (txtName, txtCompany, txtPhone, txtEmail, txtComments, chkGrower, chkProduceDealer, txtOtherCustType, chkStandardBags, chkCustomBags,txtOtherBags) VALUES (@txtName, @txtCompany, @txtPhone, @txtEmail, @txtComments, @chkGrower, @chkProduceDealer, @txtOtherCustType, @chkStandardBags, @chkCustomBags, @txtOtherBags)"
```

```
Dim myCmd As New Data.OleDb.OleDbCommand(strSQL, myConn)
```

```
myCmd.Parameters.Add("txtName", Data.OleDb.OleDbType.VarChar).Value = txtName.Text
```

```
myCmd.Parameters.Add("txtCompany", Data.OleDb.OleDbType.VarChar).Value = txtCompany.Text
```

```
myCmd.Parameters.Add("txtPhone", Data.OleDb.OleDbType.VarChar).Value = txtPhone.Text
```

```
myCmd.Parameters.Add("txtEmail", Data.OleDb.OleDbType.VarChar).Value = txtEmail.Text
```

## Methodology

```
myCmd.Parameters.Add("txtComments", Data.OleDb.OleDbType.VarChar).Value =  
txtComments.Text
```

```
myCmd.Parameters.Add("chkGrower", Data.OleDb.OleDbType.Boolean).Value =  
chkGrower.Checked
```

```
myCmd.Parameters.Add("chkProduceDealer", Data.OleDb.OleDbType.Boolean).Value  
= chkProduceDealer.Checked
```

```
myCmd.Parameters.Add("txtOtherCustType", Data.OleDb.OleDbType.VarChar).Value  
= txtOtherCustType.Text
```

```
myCmd.Parameters.Add("chkStandardBags", Data.OleDb.OleDbType.Boolean).Value  
= chkStandardBags.Checked
```

```
myCmd.Parameters.Add("chkCustomBags", Data.OleDb.OleDbType.Boolean).Value =  
chkCustomBags.Checked
```

```
myCmd.Parameters.Add("txtOtherBags", Data.OleDb.OleDbType.VarChar).Value =  
txtOtherBags.Text
```

```
myCmd.ExecuteNonQuery()
```

```
myConn.Close()
```

.
