

PostBackURL with master page causes Object reference not set error

Hi

I have two pages which both use the same master page.

Page one contains an asp:textbox control and an asp:button control with its PostBackUrl property set to the second page.

The "code behind" of the receiving page contains the following page which results in "Object reference not set..."

```
Dim txtTest As TextBox =  
CType(Page.PreviousPage.FindControl("txtTest"), TextBox)
```

```
Response.Write(txtTest.Text)
```

I have tried adding "PreviousPageType" and "Reference" directive tags to the receiving page and all result in the same error message.

This is extremely frustrating and if anyone could suggest what I might be doing wrong then I'd be very grateful.

I haven't managed to find any "PostBackUrl" examples that use master pages.

Thanks in anticipation
David
