-

When I run permcalc on my Managed C++ DLL I get the following:

..
..
..

Microsoft (R) .NET Framework Permissions Calculator.
Copyright (C) Microsoft Corporation 2005. All rights reserved.

Analyzing...

|-----|
.....

Generating output...

An error has occurred: The constructor to deserialize an object of type
'ManagedMD.ILMethodException' was not found.

..
..
..

I searched my hard drive and can't find any references to "ManagedMD". A
Google search turns up nothing, as does an MSDN search. What is this?
How do I fix it? I'm using .NET 2.0

Thanks,
—Jeremy
