I just find out I miss a step to update the deployment manifest

```
mage -Update GUI.application -AppManifest C:\Inetpub\wwwroot\GUI.exe.manifest
```

It works after that step.

"Angela Chan" wrote:

I'm not sure this is the group that I should post my questions, if not, please refer me to the right one. Thanks

I have .net 2.0 in Microsoft Window Server 2003 Web Edition server, I'm using mage.exe to update the manifest for my ClickOnce application. The following is the commands that I use to update and sign

```
mage -Update GUI.exe.manifest -fd .\temp -Version 5.0.2.6
mage -Sign GUI.exe.manifest -CertFile tempkey.pfx -Password test
mage -Sign GUI.application -CertFile tempkey.pfx -Password test
```

However, when I click on GUI.application file, I got "Application manifest has either a different computed hash than the one specified or no hash specified at all. " and "File, GUI.exe.manifest, has a different computed hash than specified in manifest."

The following is the detail error, does anyone know how to fix it? Thanks

Angela

**ERROR DETAILS**

Following errors were detected during this operation.

\* [4/5/2007 1:30:50 PM]

System.Deployment.Application.InvalidDeploymentException (HashValidation)

- Application manifest has either a different computed hash than the one specified or no hash specified at all.
